

STOCK MARKET ANALYSIS DASHBOARD

Jan 2000 - Apr 2021 | 10 Stocks | 44,219 Rows

ZONE 1 — KPI SCORECARDS (6 CARDS)

BEST PERFORMER	HIGHEST RETURN	WORST PERFORMER	WORST DAY LOSS	BEST DAY GAIN	MOST TRADED
HINDUNILVR	11.90x	WIPRO	-39.5%	+27.7%	TATAMOTORS
11.90x return	▲ 10.90 vs 1x	0.18x return	WIPRO	SBIN	53.7B shares

ZONE 2 — FILTER CONTROLS

Symbol filter — use dropdown in B10 [1]						Year filter — use dropdown in I10 [2]					
ALL [3]	AXISBANK	HDFCBANK	HINDUNILVR	INFY	ITC	RELIANCE	ALL [4]	2000	2005	2008	2015
SBIN	TATAMOTORS	TCS	WIPRO					2020	2021		

ZONE 3 — CHARTS (REQUIRED BY PROJECT GUIDE)

CHART 3 — REQUIRED

ZONE 4 — RETURN LEADERBOARD

Stock	Raw Price Return	Avg Daily Ret	Avg Volatility	Total Volume
HINDUNILVR	11.90x	+0.09%	24.3%	7.3B
HDFCBANK	8.31x	+0.08%	29.6%	11.2B
RELIANCE	7.92x	+0.07%	32.3%	29.6B
TCS	3.07x	+0.06%	30.5%	6.9B
SBIN	1.45x	+0.06%	35.8%	53.3B
AXISBANK	1.28x	+0.07%	39.2%	23.5B
TATAMOTORS	0.67x	+0.05%	42.0%	53.7B
INFY	0.47x	+0.01%	30.1%	11.0B
ITC	0.29x	+0.03%	30.3%	38.1B
WIPRO	0.18x	+0.02%	38.4%	11.9B

Data note: Cumulative returns use raw close/prev-close price movement and are not split-adjusted total returns. Daily-loss KPI excludes <~40% corporate-action/split artifacts. HINDUNILVR is the clean best performer in this raw-price dataset.

The first part of the paper discusses the importance of the research and the objectives of the study. It then presents a literature review of the existing research on the topic. The methodology section describes the research design and the data collection process. The results section presents the findings of the study, and the conclusion section summarizes the main findings and provides recommendations for future research.

The study was conducted in a laboratory setting. The participants were recruited from a local university and were assigned to two groups: the experimental group and the control group. The experimental group received the intervention, while the control group did not. The data were collected over a period of six weeks.

The results of the study show that the intervention had a significant positive effect on the outcome variable. The experimental group showed a significant improvement in the outcome variable compared to the control group. The findings suggest that the intervention is effective in improving the outcome variable.

The conclusion of the study is that the intervention is effective in improving the outcome variable. The findings suggest that the intervention is a promising approach for improving the outcome variable. Further research is needed to confirm the findings and to explore the long-term effects of the intervention.

The first of these is the fact that the system is not a simple one. It is a complex system, and as such, it is not possible to understand it by looking at its parts in isolation. The system is a whole, and its behavior is determined by the interactions between its parts. This is a fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The second of these is the fact that the system is dynamic. It is not a static system, and its behavior changes over time. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The third of these is the fact that the system is open. It is not a closed system, and it interacts with its environment. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The fourth of these is the fact that the system is self-organizing. It is not a system that is controlled from the outside, and it is able to adapt to its environment. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The fifth of these is the fact that the system is resilient. It is able to withstand shocks and stresses, and it is able to recover from them. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The sixth of these is the fact that the system is sustainable. It is able to continue to exist and function over a long period of time. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The seventh of these is the fact that the system is equitable. It is able to provide benefits to all of its members, and it is able to distribute resources fairly. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The eighth of these is the fact that the system is just. It is able to treat all of its members equally, and it is able to enforce the rules of the system. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The ninth of these is the fact that the system is transparent. It is able to make its decisions and actions visible to all of its members, and it is able to explain its reasoning. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The tenth of these is the fact that the system is accountable. It is able to take responsibility for its actions, and it is able to be held accountable for its decisions. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The first of these is the fact that the system is not a simple one. It is a complex system, and as such, it is not possible to understand it by looking at its parts in isolation. The system is a whole, and its behavior is determined by the interactions between its parts. This is a fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The second of these is the fact that the system is dynamic. It is not a static system, and its behavior changes over time. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The third of these is the fact that the system is open. It is not a closed system, and it interacts with its environment. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The fourth of these is the fact that the system is self-organizing. It is not a system that is imposed from the outside, and it is not a system that is controlled by a central authority. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The fifth of these is the fact that the system is resilient. It is not a system that is fragile, and it is not a system that is easily disrupted. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The sixth of these is the fact that the system is sustainable. It is not a system that is unsustainable, and it is not a system that is doomed to failure. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The seventh of these is the fact that the system is equitable. It is not a system that is unfair, and it is not a system that is biased. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The eighth of these is the fact that the system is just. It is not a system that is unjust, and it is not a system that is oppressive. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The ninth of these is the fact that the system is peaceful. It is not a system that is violent, and it is not a system that is destructive. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

The tenth of these is the fact that the system is harmonious. It is not a system that is disharmonious, and it is not a system that is in conflict. This is another fundamental principle of systems thinking, and it is one that is often overlooked in traditional approaches to problem-solving.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These factors include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor in the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including improvements in medical care, a decline in the incidence of infectious diseases, and a decline in the incidence of violence.

The decline in the birth rate has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of children per woman, a decline in the age at which women have their first child, and a decline in the number of women who have children.

The decline in the rate of migration has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of people who are migrating, a decline in the number of people who are migrating to the world, and a decline in the number of people who are migrating to the world.

The increase in the number of people in the world who are under 15 years of age has a number of implications. These implications include a decline in the average age of the world's population, a decline in the number of people who are working, and a decline in the number of people who are paying taxes.

The decline in the average age of the world's population has a number of implications. These implications include a decline in the number of people who are working, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the world's economy.

The decline in the number of people who are working has a number of implications. These implications include a decline in the number of people who are paying taxes, a decline in the number of people who are contributing to the world's economy, and a decline in the number of people who are supporting the world's population.

The decline in the number of people who are paying taxes has a number of implications. These implications include a decline in the number of people who are contributing to the world's economy, a decline in the number of people who are supporting the world's population, and a decline in the number of people who are contributing to the world's culture.

The decline in the number of people who are contributing to the world's economy has a number of implications. These implications include a decline in the number of people who are supporting the world's population, a decline in the number of people who are contributing to the world's culture, and a decline in the number of people who are contributing to the world's environment.

The decline in the number of people who are supporting the world's population has a number of implications. These implications include a decline in the number of people who are contributing to the world's culture, a decline in the number of people who are contributing to the world's environment, and a decline in the number of people who are contributing to the world's economy.

The decline in the number of people who are contributing to the world's culture has a number of implications. These implications include a decline in the number of people who are contributing to the world's environment, a decline in the number of people who are contributing to the world's economy, and a decline in the number of people who are contributing to the world's population.

The decline in the number of people who are contributing to the world's environment has a number of implications. These implications include a decline in the number of people who are contributing to the world's economy, a decline in the number of people who are contributing to the world's population, and a decline in the number of people who are contributing to the world's culture.

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.0 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These factors include a decline in the death rate, a decline in the birth rate, and a decline in the rate of migration.

The decline in the death rate has been the most significant factor in the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including improvements in medical care, a decline in the incidence of infectious diseases, and a decline in the incidence of violence.

The decline in the birth rate has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of children born to women, a decline in the number of children born to women who are under 15 years of age, and a decline in the number of children born to women who are 15 years of age or older.

The decline in the rate of migration has also contributed to the increase in the number of people in the world who are under 15 years of age. This decline has been due to a number of factors, including a decline in the number of people who are migrating from one country to another, a decline in the number of people who are migrating from one region to another, and a decline in the number of people who are migrating from one social class to another.

The increase in the number of people in the world who are under 15 years of age has a number of implications. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the environment. These implications include a decline in the number of people who are using natural resources, a decline in the number of people who are polluting the environment, and a decline in the number of people who are contributing to climate change.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.

The increase in the number of people in the world who are under 15 years of age also has a number of implications for the future of the world. These implications include a decline in the number of people who are in the workforce, a decline in the number of people who are paying taxes, and a decline in the number of people who are contributing to the economy.
